

The annual vaccination of health care workers for influenza is a process of care measure prioritized by the Maryland Health Care Commission's (MHCC) Healthcare-Associated Infections Advisory Committee for public reporting. The 2010-2011 Annual Health Care Worker Influenza Vaccination Survey results are now available on the Hospital Performance Evaluation Guide. The survey results show that the Maryland hospital vaccination rate for the 2010-2011 flu season is 81.4%. This figure represents almost 80,000 Maryland hospital employees who were vaccinated during the most recent flu season.
